Лабораторна робота № 12.

Тема: Функції РНР для роботи з базами даних.

Мета роботи: вивчити основи роботи з базами даних засобами РНР.

Написати сценарій РНР, в якому для бази даних з попередньої роботи виконується зазначені завдання. Відповідно до завдання створити нову базу (ім'я бази і таблиць задати в формі), в яку записати результат виконання (найменування полів і типи даних в них повинні бути отримані з вихідної бази даних). Також результат виконання відобразити на сторінці з HTML розміткою і перевірити через phpMyAdmin.

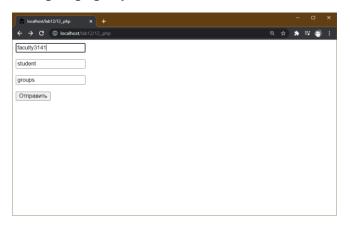

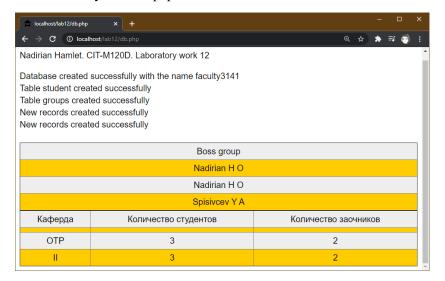

Рисунок 1 – форми з іменем та назвами таблиць

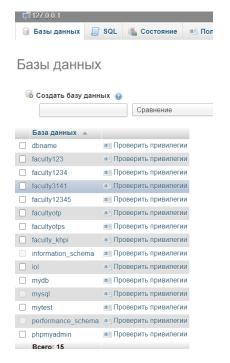

Рисунок 3 – БД у phpMyAdmin

Рисунок 4 – Таблиці у phpMyAdmin

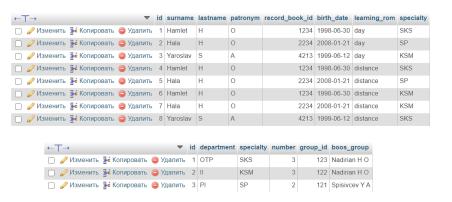

Рисунок 5 – таблиця student та groups
